## All in one Dust suppressor - DD TERA

Our Newest unit is the De Dust Tera all in one. With the latest water droplet technology to help contain and reduce airborne dust particles, it's the most advanced unit on offer today. It has three settings, Power boost for that extra coverage, normal, and eco which will conserve power and water when the full 60m reach is not required. With a built in 2200 litre water bowser and an on-board generator it turns up ready to work with no need for trailing cables and hoses. Fitted on a site towable chassis it is easy to manoeuvre around site as the project progresses. Fitted with remote oscillation it is simple to set up the area of coverage as required. With a throw of up to 60 meters it provides plenty of coverage for most sites.

For more information about our range of dust suppression units please contact our hire desk.

	DD Tera AIO
Weight	3700 KG
Throw	60 M
Oscillation	340 degrees
Water	2000 Litres
